## Flush 1 relay

| ORDERING CODE | Z-WAVE FREQUENCY |
| :---: | :---: |
| ZMNHAA2 | $868,4 \mathrm{MHz}$ |
| ZMNHAA3 | $921,4 \mathrm{MHz}$ |
| ZMNHAA4 | $908,4 \mathrm{MHz}$ |
| ZMNHAA5 | $869,0 \mathrm{MHz}$ |
| ZMNHAA6 | $916,0 \mathrm{MHz}$ |

「his Z-Wave module is used for switching on or off the electrical device (e.g. light, fan, etc ..). The module can be controlled either hrough Z-wave network or through the wall ; witch.
The module is designed to be mounted inside a "flush mounting box", hidden behind a raditional wall switch.
Vodule measures power consumption of lectrical device and supports connection of digital temperature sensor. It is designed to act as repeater in order to improve range and ;tability of $Z$-wave network.

## Supported switches

Vodule supports mono-stable switches push button) and bi-stable switches. The nodule is factory set to operate with bi-stable ;witches.

## nstallation

Before the installation disconnect power supply.
Connect the module according to electrical diagram.
Locate the antenna far from metal elements (as far as possible).
Do not shorten the antenna.

## Danger of electrocution!

- Module installation requires a great degree of skill and may be performed only by a qualified and licensed electrician.
- Even when the module is turned off, voltage may be present on its terminals. Any works on configuration changes related to connection mode or load must be always performed by disconnected power supply (disable the fuse).

## Note!

Do not connect the module to loads exceeding recommended values. Connect the module only in accordance to the below diagrams Improper connections may be dangerous.

## Package contents

- Flush 1 relay

## Electrical diagram 230VAC

## Notes for the diagram:

N Neutral lead
L Live lead
Q Output for electrical device
I3 Input for switch/push button or sensor
12 Input for switch/push button or sensor
I1 Input for switch/push button
TS Terminal for digital temperature sensor (only for Flush 1 relay module compatible digital temperature sensor, which must be ordered separately).

## Electrical diagram 24VDC

Notes for the diagram:
N + 24VDC
L - 24VDC
Q Output for electrical device
I3 Input for switch/push button or sensor
12 Input for switch/push button or sensor Input for switch/push button
TS Terminal for digital temperature sensor (only for Flush 1 relay module compatible digital temperature sensor, which must be ordered separately).

S Service button (used to add or remove module from the Z-Wave network).

Durability of the module depends on applied load. For resistive load (light bulbs, etc.) and 10A current consumption of each individual electrical device, the durability exceeds 100 000 switches of each individual electrical device.

Module Inclusion (Adding to Z-wave network)

- Connect module to power supply (with temperature sensor connected - if purchased),
- bring module within maximum 1 meter (3 feet) of the main controller,
- enable add/remove mode on main controller
- auto-inclusion (30 minutes after connected to power supply) or
- press service button $\mathbf{S}$ for more than 2 second or
- press push button $\mathbf{I 1}$ three times within 3 s ( 3 times change switch state within 3 seconds).

## Module Exclusion/Reset (Removing from Z-Wave network)

- Connect module to power supply
- bring module within maximum 1 meter (3 feet) of the main controller,
- enable add/remove mode on main controller
- press service button $\mathbf{S}$ for more than 6 second or
- press push button 11 five times within 3 s (5
times change switch state within 3 seconds) in the first 60 seconds after the module is connected to the power supply.
By this function all parameters of the module are set to default values and own ID is deleted If service button $S$ is pressed more than 2 and less than 6 second module is excluded, but configuration parameters are not set to default values.

## Association

Association enables Flush 1 relay module to transfer commands inside Z-Wave network directly (without main controller) to other Z-Wave modules.

## Associated Groups:

Group 1: basic on/off (triggered at change of the output $Q$ state and reflecting its state) up to 16 nodes.
Group 2: basic on/off (triggered at change of the input I2 state and reflecting its state) up to 16 nodes.
Group 3: basic on/off (triggered at change of the input 13 state and reflecting its state) up to 16 nodes.
Group 4: default reporting group (reserved for the main controller).

## Configuration parameters

## Parameter no. 1 - Input 1 switch type

Available configuration parameters (data type is 1 Byte DEC):

- default value 1
- 0 mono-stable switch type (push button)

1 bi-stable switch type
Parameter no. 2 - Input 2 contact type
Available configuration parameters (data typs is 1 Byte DEC):

- default value 0
- 0 NO (normally open) input type
- 1 NC (normally close) input type

Parameter no. 3 - Input 3 contact type
Available configuration parameters (data typt
is 1 Byte DEC):

- default value 0
- 0 NO (normally open) input type
- 1 NC (normally close) input type

## Parameter no. 10 - Activate / deactivat

 functions ALL ON/ALL OFFAvailable configuration parameters (data typt is 1 Byte DEC):

- default value 255
- 255-ALL ON active, ALL OFF active
- 0-ALL ON is not active ALL OFF is no active
- 1 - ALL ON is not active ALL OFF active - 2 - ALL ON active ALL OFF is not active Flush 1 relay module responds to commands ALL ON / ALL OFF that may be sent by the main controller or by other controller belongins to the system.

Parameter no. 11-Automatic turning of relay after set time
Available configuration parameters (data typt is 2 Byte DEC):

- Default value 0
- 0 - Auto OFF disabled
- $1-65535=0,01$ second $-655,35$ seconds Auto OFF enabled with define time, step is 10 mseconds .

Parameter no. 30-Saving the state of the relay after a power failure
Available configuration parameters (data typt is 1 Byte DEC):

- default value 0
- 0 - Flush 1 relay module saves its state before power failure (it returns to the las position saved before a power failure)
- 1-Flush 1 relay module does not save the state after a power failure, it returns ts "off" position.

## Jarameter no. 40 - Power reporting in

t van power change $100=0 \%-100 \%$. Available configuration
sarameters (data type is 1 Byte DEC)

## default value 3

0 - Reporting Disabled
$1-100=1 \%-100 \%$ Reporting enabled Power report is send (push) only when actual power in Watts in real time changes for more than set percentage comparing to previous actual power in Watts, step is 1\%.
SOTE: if power changed is less than 1W, the eport is not send (pushed), independent of jercentage set.

## 'arameter no. 42 - Power reporting in

 Natts by time intervalset value means time interval ( $0-65535$ ) in ;econds, when power report is send.
tvailable configuration parameters (data type s 2 Byte DEC):
default value 300 (power report in Watts is send each 300s)
0 - Reporting Disabled
$1-65535=1$ second -65535 seconds. Reporting enabled. Power report is send with time interval set by entered value.

Technical Specifications

| Power supply | 110-230 VAC $\pm 10 \%$ 50/60Hz, 24-30VDC |
| :---: | :---: |
| Rated load current of AC output (resistive load)* | 1 X 10A / 230VAC |
| Rated load current of DC output (resistive load) | $1 \mathrm{X} 10 \mathrm{~A} / 30 \mathrm{VDC}$ |
| Output circuit power of AC output (resistive load) | 2300W (230VAC) |
| Output circuit power of DC output (resistive load) | 240W (24VDC) |
| Power measurement accuracy | $\begin{aligned} & \mathrm{P}=5-50 \mathrm{~W},+/-3 \mathrm{~W} \\ & \mathrm{P}>50 \mathrm{~W},+/-3 \% \end{aligned}$ |
| Digital temperature sensor range (sensor must be ordered separately) | $-50 \sim+125^{\circ} \mathrm{C}$ |
| Operation temperature | $-10 \sim+40^{\circ} \mathrm{C}$ |
| Distance | up to 30 m indoors (depending on building materials) |
| Dimensions (W $\times$ H x D) | $41,8 \times 36,8 \times 15,4 \mathrm{~mm}$ |
| Weight | 25 g |
| Electricity consumption | 0,4W |
| For installation in boxes | $\varnothing \geq 60 \mathrm{~mm}$ or 2 M |
| Switching | Relay |

In case of load other than resistive, pay attention to the value of $\cos \varphi$ and if necessary apply load lower than the rated load. Max current for $\cos \varphi=0,4$ is 3 A at $250 \mathrm{VAC}, 3 \mathrm{~A}$ at $24 \mathrm{VDC} \mathrm{L} / \mathrm{R}=7 \mathrm{~ms}$.

This product can be included and operated in any Z-Wave network with other Z-Wave certified devices from any other manufacturers. All constantly powered nodes in the same network will act as repeaters regardless of the vendor in order to increase reliability of the network.

## mportant disclaimer

Z-Wave wireless communication is inherently not always $100 \%$ reliable, and as such, this product should not be used in situations in which life and/or valuables are solely dependent on its function.

## Warning!

Do not dispose of electrical appliances as unsorted municipal waste, use separate collection facilities.
Contact your local government for information regarding the collection systems available. If electrical appliances are disposed of in landfills or dumps, hazardous substances can leak into the groundwater and get into the food chain, damaging your health and well-being. When replacing old appliances with new once, the retailer is legally obligated to take back your old appliance for disposal at least for free of charge.
This user manual is subject to change and improvement without notice.
